AUTOCARE

Automotive Surface Refinement
Cleaning & Protection System

About ELVI BARDAHL

The company head quartered at Mumbai, India is the sole authorized associates of Bardahl Manufacturing Corporation, Seattle, USA for marketing the world famous "Bardahl" brand of automotive products.

Bardahl products are sold worldwide in over 90 countries, on 6 continents, packaged in 16 languages and are available in India since 20 years.

At ELVI Bardahl, we innovate and create values to life. The changing global conditions of the automotive sector inspire us to introduce innovative and superior products for the needs of the industry.

ELVI Bardahl aims to meet global standards by offering products for OEM Direct, Automotive Detailing, Automotive & Industrial Aftermarket (lubricants & additives, mechanical maintenance, aerosol cleaners & lubes). The company has a wide and extensive network of channel partners and sales & service teams to support its vision.

AUTOCARE

Automotive Surface Refinement
Cleaning & Protection System

AUTOCARE services can be a simple car wash or a wax job or a complete cleaning and protection service - including having the car interior or the engine compartment cleaned. To car enthusiasts, a freshly detailed vehicle is a work of art to be displayed.

Why AUTOCARE?

The appearance of a vehicle deteriorates due to environmental exposure or damage. Therefore, you need a polish that will quickly, yet gently, remove the damage to reveal a fresh, brilliant finish. Salt, bugs, acid rain, road dirt, tree sap, smog etc. damages the chrome & exterior surface finish. Leaving these factors unattended will eventually eat away the surface paint finish and may also cause rust & corrosion.

ELVI Bardahl's different range of AUTOCARE polishes and cleaning solvents are designed to remove heavy oxidation caused by exposure to the sun & weather elements.

People spend almost as many hours each week in the car as they do at home. Car interiors rely on mechanized air movement to create a false sense of freshness when the heater and air conditioner are operating. Dust mites, mold and germs will circulate throughout the car interior without frequent intervention. A thorough cleaning with ELVI Bardahl Autocare range of cleaners & dressers along with vacuums, removes these harmful particles and kills germs. Another reason why detailing your car is important.

To conclude, AUTOCARE is necessary for:

- Restoration of the vehicle's exterior surfaces.
- Protection against corrosion.
- Interior cleaning for a pure, germ free & healthy cabin.
- Vinyl & Rubber care.
- Air-conditioning system maintenance.
- Reflection to once personality.
- Better re-sale value of the car in future.

Exterior Care Treatments

A thorough detailing consists of automotive exterior and interior detailing.

Paint Care System

The most noticeable areas of a vehicle are the exteriors. Restoring its gloss by means of ELVI Bardahl Paint Care System treatment is a must since the car surface loses its shine with the passing of time. Dirt, grease, imperfections - they all disappear during the treatment. And the treatment ensures that the car looks sparkling glossy – almost like a showroom finish.

The process removes:

- Severe water stain marks or swirl marks.
- Heavy oxidation due to sun and weather exposure.
- Heavy swirl marks or other micro marring.
- Poor repaint or paint repair blending.
- Poor surface finish (orange peel).

Headlight Restoration System

Over a period of time the headlights can become hazy, yellowish or scratched which do not allow the headlights to emit optimum light. This causes the light rays to reflect in different directions, this makes not only the night driving more dangerous but also blinds other drivers.

A 3-stage process of headlight restoration which involves rubbing, polishing and protection, gives a superior and a new looking headlight. Also makes night driving a safer experience. The process also includes application of a special-Headlight Pro Sealant coat, that is applied over the headlight to prevent it from cracking and deteriorating due to UV rays effect.

Windshield Cleaning & Polishing

The treatment involves cleaning the windshield with clay bar and polishing off minor swirls, stains, dirt or foggy glasses to make it look, as good as new. The treatment will significantly reduce glare during night as well as in the rain.

Windshield polish treatment have the following benefits:

- Helps reduce water stain marks and other stubborn stains.
- Improves clarity and visibility.
- Significantly reduces night glare.
- Water repellent properties.
- Allows insects to be easily washed away.

Alloy Wheel Cleaning & Protection

A clean and sparkling alloy wheels gives an aesthetic look to the car's overall appearance. Alloy wheel cleaning and protection treatment is an integral part of a car care program. Brake dust, road grime, tar, dirt, grease etc. settle down over the alloy wheels which gives a dirty look to the vehicle.

Regular maintenance of alloy wheels is essential to protect them and avoid dirt to settle permanently. Alloy wheel cleaning and protection treatment will restore the shine of the Alloy wheels thereby making them look as good as new.

Emblem & Chrome Cleaning

Tarnish on chrome causes it to lose its shine and look dirty. Washing chrome (or the complete car) in greasy or hard water leaves a dirty film on the chrome & metal parts which is difficult to remove. Bardahl Emblem & Chrome Cleaning removes even the toughest hard water stains, limescale deposit, soap scum, white stains from metal / chrome surfaces.

Bardahl Emblem Polish & Protector is expressly formulated to work on metal / chrome surfaces. - to clean, restore & leave a sparkling shine.

Anti-Corrosion Treatments

Rust Coat Underbody Coating

Rust is an oxidation process that attacks metals and ruins the underbody of vehicles. Over time rust eats its way to the metal's base layer and causes perforations in several areas. This corrosion can spread very quickly and effect the life & appearance of an automobile.

Anti-Corrosion treatments provide protection an automobile which has become susceptible to corrosion and acts as a barrier between the sheet metal and rust causing elements.

Rust Coat is an ideal protection of vehicle underbody & wheel arches against rust & corrosion, abrasives from moisture, stone chips and road salt. The treatment also deadens droning noise and reduces vibrations while enhancing the body life. It is recommended that a car should be protected by rust coat underbody coating every two years with an interim inspection every year to make sure any small holes in the corrosion protection coating layer are professionally assessed and repaired.

Silencer Coating

Automotive silencer & exhaust system passes through rough road conditions effecting it with damages due to stone chips, moisture & dirty water, road grime etc. This can cause rusted silencers.

Silencer coating is a heat resistant anti corrosive superior coating for exhaust system and galvanic surfaces. The coating not only protects the treated areas against corrosion but also gives the silencers a new look. Silencer coating is available in silver or black matt finish.

Internal Panel Protection

Internal Panel Protection protects the cavity areas like boot internals, door panels, etc from rust and corrosion on the cars. The product is low viscous with good creeping properties for close fits and & clearances while making a water & salt water resistant coat to protect against corrosion. It forms a fine tear resistant lubricating film which penetrates well in areas with limited accessibility. The treatment enhances body life and increases resale value of the vehicle.

Interior Detailing

Interior Cleaning Treatments

Interior & Upholstery cleaning is a very important part of car detailing system. Spills on the seats are difficult to control because of the movement of the vehicle when the spill occurs. A dirty car interior looks bad, causing recurring illness because of build-up of germs, mold and dust. These substances cause discomfort or allergies to the passengers.

Interior cleaning system transforms the car interiors into a new look; freshens up, making it a healthy space to stay. Interior cleaning process involves vacuuming, brushing/scrubbing/shampooing, wiping/re-vacuuming, deodorizing & dressing. The Backtaklene treatment ensures a germ free and healthy car cabin.

Air-Condition Maintenance Services

The inside of a car can contain up to 10-times more pollutants and contaminants than the air in an equal volume of space outside of the car. A common source of problem is the air conditioning system. This wet air conditioning environment is a good place for mold and mildew to grow and for dust & pollen to collect which find their way back into the air system. Bacteria grow exceptionally well in the AC evaporator area, which becomes warm but still damp when you shut the car off.

AC Maintenance solutions are designed to keep the automotive air-conditioning system clean and to make the car cabin fresh & healthy, in addition to keep the AC efficiency to optimum.

Aero Fresh

Aero Fresh is a one shot car cabin antibacterial agent for a clean & fresh air circulation in the car interior. It effectively eliminates smoke smell & unpleasant odour, preventing the growth of mold, bacteria for a long period. The treatment instantly cleans and disinfects the car air conditioning system through an easy application.

Aircon Klene

Aircon Klene is a foam based spray for effective cleaning of the AC system. It eliminates bad smell, dust, fungus, bacteria, nicotine and other dirt that may clog the air-conditioning system. Avoids the proliferation of micro-organisms and mildew while increasing the cooling efficiency. It can be used on any air conditioning system.

AC Evaporator Cleaning

The AC evaporator becomes wet as humid air is passed over its cool surface causing bacteria to grow. In addition, trapped contaminants insulate the evaporator, reducing heat-transfer efficiency as well as airflow. This contamination should be cleaned regularly. ELVI specialty solvents Eva Klene & Eva Flush are specially formulated to clean & flush the AC evaporator system. The solvents are sprayed on the evaporator using a visual borescope spray gun integrated cleaning device.

Other Autocare Treatments

Car Lubrication Package - CLP

A set of lubrication & cleaning treatments using lubrication spray for the maintenance of hinges of door, bonnet, dickey, seat fore & aft adjustment channels, Window Dresser for the window rubber channels, and the Battery Terminal shield protects the battery terminals.

Air Intake Cleaning & Engine De-Carbonising System

Stalling & rough idling is often caused by a build-up of deposits of airborne contaminants, oil and combustion gases in the throttle body / air intake system / combustion chamber.

Air Intake and Engine De-Carbonising system cleans throttle body, idle passages, intake plenum & the combustion areas to remove deposits from the idle passages & improve drivability. The treatment improves acceleration, fuel economy & overall performance.

Airflow Sensor Cleaning

Air Flow Sensor Cleaning improves and restores the performance and reliability of air flow sensors which are in use on modern petrol & diesel engines. It quickly and effectively cleans, both the thermistor and the hot wire or hot plate. A dirty hot wire or hot plate in the air flow sensor leads to incorrect readings for calculating the fuel/air mixture, further affecting the engine performance, increased fuel consumption and impaired starting and idling properties.

Dressers for Detail

Detailing is incomplete without the dressings. The process includes applying dressing to those surfaces that can't be waxed or otherwise protected. Areas like dashboard and other vinyl, rubber and leather surfaces need regular protection. Vinyl, tyre or rubber dressings protect and beautify those areas.

Tools & Accessories

Best results of detailing are only achieved with the help of right tools for the right treatments. Wool pads, foam pads, applicator foam guns, sprayer bottles, polisher machines, Bardahl Proklene equipments are to be used for optimum results.

Protective Gears

Protect yourself with the protective gears. Eye glasses, head gear helmet, mask, gloves etc. are the protective gears that needs to be adopted as part of the detailing process - system.

Dress in Style

ELVI Bardahl has a set of uniforms and aprons to perform an organized & professional detailing process. Use the ELVI Bardahl wear for announcing to the world that you are a detailing expert for an organized detailing process.
